

## Appendix 1. Action Points to be brought to the next NIFF meeting

- 1.1 Fishery Management Plan for Waterford Estuary Razor Clams – see attached document. The attached document outlines what was presented/proposed and agreed to at the meeting of the South East RIFF on the 15<sup>th</sup> February 2018. Since then this has been updated in line with the total allowable catch for the fishery of 40 tonnes being made known by the MI. The final plan has been submitted to IMG.
- 1.2 Statement from the South East RIFF that its representatives were/are not in agreement with all of the proposals that were discussed at a meeting of the Bi valve Working Group held on the 29<sup>th</sup> November 2017, which were subsequently submitted as a set of proposals at a meeting of the West RIFF. The South East RIFF believes that new fisheries need to have a common set of management measures to protect their sustainability, but that the extent of certain particular measures such as the amount of quota, size/width of dredge blade etc. need to be agreed/managed locally.
